

B-Tech Computer Science & Engineering

Fifth Semester

Course Syllabus & Course Plan

S5 - CORE COURSES

Course No.	Course Name	L-T-P Credits	Year of Introduction
CS301	THEORY OF COMPUTATION	3-1-0-4	2015
Course Objectives <ol style="list-style-type: none"> 1. Introduce the concept of formal languages. 2. Discuss the Chomsky classification of formal languages with discussion on grammar and automata for regular, context-free, context sensitive and unrestricted languages. 3. Discuss the notions of decidability and halting problem. 			
Syllabus <p>Introduction to Automata Theory, Structure of an automaton, classification of automata, grammar and automata for generating each class of formal languages in the Chomsky Hierarchy, decidability and Halting problem.</p>			
Expected Outcome <p>Student is able to</p> <ol style="list-style-type: none"> 1. Classify formal languages into regular, context-free, context sensitive and unrestricted languages. 2. Design finite state automata, regular grammar, regular expression and Myhill- Nerode relation representations for regular languages. 3. Design push-down automata and context-free grammar representations for context-free languages. 4. Design Turing Machines for accepting recursively enumerable languages. 5. Understand the notions of decidability and undecidability of problems, Halting problem. 			
Text Books <ol style="list-style-type: none"> 1. John E Hopcroft, Rajeev Motwani and Jeffrey D Ullman, Introduction to Automata Theory, Languages, and Computation, 3/e, Pearson Education, 2007 2. John C Martin, Introduction to Languages and the Theory of Computation, TMH, 2007 3. Michael Sipser, Introduction To Theory of Computation, Cengage Publishers, 2013 			
References <ol style="list-style-type: none"> 1. Dexter C. Kozen, Automata and Computability, Springer1999. 			

Course Plan			
Module	Contents	Hours	Sem. Exam Marks %
I	Introduction to Automata Theory and its significance. Type 3 Formalism: Finite state automata – Properties of transition functions, Designing finite automata, NFA, Finite Automata with Epsilon Transitions, Equivalence of NFA and DFA, Conversion of NFA to DFA, Equivalence and Conversion of NFA with and without Epsilon Transitions.	09	15 %
II	Myhill-Nerode Theorem, Minimal State FA Computation. Finite State Machines with Output-Mealy and Moore machine (Design Only), Two- Way Finite Automata. Regular Grammar, Regular Expressions, Equivalence of regular expressions and NFA with epsilon transitions. Converting Regular Expressions to NFA with epsilon transitions Equivalence of DFA and regular expressions, converting DFA to Regular Expressions.	09	15 %
FIRST INTERNAL EXAM			
III	Pumping Lemma for Regular Languages, Applications of Pumping Lemma. Closure Properties of Regular sets (Proofs not required), Decision Problems related with Type 3 Formalism Type 2 Formalism:- Context-Free Languages (CFL), Context-Free Grammar (CFG), Derivation trees, Ambiguity, Simplification of CFG, Chomsky Normal Form, Greibach normal forms	08	15 %

IV	Non-Deterministic Pushdown Automata (NPDA), design. Equivalence of acceptance by final state and empty stack in PDA. Equivalence between NPDA and CFG, Deterministic Push Down Automata, Closure properties of CFLs (Proof not required), Decision Problems related with Type 3 Formalism.	07	15 %
SECOND INTERNAL EXAM			
V	Pumping Lemma for CFLs, Applications of Pumping Lemma. Type 1 Formalism: Context-sensitive Grammar. Linear Bounded Automata (Design not required) Type 0 Formalism: Turing Machine (TM) – Basics and formal definition, TMs as language acceptors, TMs as Transducers, Designing Turing Machines.	08	20 %
VI	Variants of TMs -Universal Turing Machine, Multi-tape TMs, Non Deterministic TMs, Enumeration Machine (Equivalence not required), Recursively Enumerable Languages, Recursive languages, Properties of Recursively Enumerable Languages and Recursive Languages, Decidability and Halting Problem. Chomsky Hierarchy	07	20 %
END SEMESTER EXAM			

Question Paper Pattern

1. There will be *five* parts in the question paper – A, B, C, D, E
2. Part A
 - a. Total marks : 12
 - b. *Four* questions each having 3 marks, uniformly covering modules I and II; All*four* questions have to be answered.
3. Part B
 - a. Total marks : 18

- b. Three questions each having 9 marks, uniformly covering modules I and II; Two questions have to be answered. Each question can have a maximum of three subparts.
4. Part C
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules III and IV; All four questions have to be answered.
5. Part D
 - a. Total marks : 18
 - b. Three questions each having 9 marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts
6. Part E
 - a. Total Marks: 40
 - b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
 - c. A question can have a maximum of three sub-parts.
7. There should be at least 60% analytical/numerical questions.

Course No.	Course Name	L-T-P Credits	Year of Introduction
CS303	SYSTEM SOFTWARE	2-1-0-3	2015
Course Objectives <i>To make students understand the design concepts of various system software like Assembler, Linker, Loader and Macro pre-processor, Utility Programs such as Text Editor and Debugger.</i>			
Syllabus Different types of System Software, SIC & SIC/XE Architecture and Programming, Basic Functions of Assembler, Assembler Design, Single pass and 2 Pass Assemblers and their Design, Linkers and Loaders, Absolute Loader and Relocating loader, Design of Linking Loader, Macro Processor and its design, Fundamentals of Text Editor Design, Operational Features of Debuggers			
Expected Outcome Student is able to <ol style="list-style-type: none">1. <i>distinguish different software into different categories..</i>2. <i>design, analyze and implement one pass, two pass or multi pass assembler.</i>3. <i>design, analyze and implement loader and linker.</i>4. <i>design, analyze and implement macro processors.</i>5. <i>critique the features of modern editing /debugging tools.</i>			

Text book

1. Leland L. Beck, System Software: An Introduction to Systems Programming, 3/E, Pearson Education Asia.

3. John J. Donovan, Systems Programming, Tata McGraw Hill Edition 1991.
4. Writing UNIX device drivers - George Pajari - Addison Wesley Publications (Ebook : <http://tocs.ulb.tu-darmstadt.de/197262074.pdf>).
5. Peter Abel, IBM PC Assembly Language and Programming, Third Edition, Prentice Hall of India.
6. Jonathan Corbet, Alessandro Rubini, Greg Kroah-Hartman, Linux Device Drivers, Third Edition, O.Reilly Books
7. M. Beck, H. Bohme, M. Dziadzka, et al., Linux Kernel Internals, Second Edition, Addison Wesley Publications,
8. J Nithyashri, System Software, Second Edition, Tata McGraw Hill.
9. http://gcc.gnu.org/onlinedocs/gcc-2.95.3/cpp_1.html - The C Preprocessor

Course Plan

Module	Contents	Hours	Sem Exam. Marks %
I	Introduction : System Software Vs. Application Software, Different System Software- Assembler, Linker, Loader, Macro Processor, Text Editor, Debugger, Device Driver, Compiler, Interpreter, Operating System(Basic Concepts only)	2	15%
	SIC & SIC/XE Architecture, Addressing modes, SIC & SIC/XE Instruction set, Assembler Directives and Programming.	6	

II	<p><i>Assemblers</i> Basic Functions of Assembler. Assembler output format - Header, Text and End Records- Assembler data structures, Two pass assembler algorithm, Hand assembly of SIC/XE program, Machine dependent assembler features.</p>	6	15 %
FIRST INTERNAL EXAM			
III	<p><i>Assembler design options:</i> Machine Independent assembler features - program blocks, Control sections, Assembler design options- Algorithm for Single Pass assembler, Multi pass assembler, Implementation example of MASM Assembler</p>	7	15 %
IV	<p><i>Linker and Loader</i> Basic Loader functions - Design of absolute loader, Simple bootstrap Loader, Machine dependent loader features- Relocation, Program Linking, Algorithm and data structures of two pass Linking Loader, Machine dependent loader features, Loader Design Options.</p>	7	15 %
SECOND INTERNAL EXAM			
V	<p><i>Macro Preprocessor:-</i> Macro Instruction Definition and Expansion. One pass Macro processor Algorithm and data structures, Machine Independent Macro Processor Features, Macro processor design options</p>	7	20 %

VI	<p><i>Device drivers:</i> Anatomy of a device driver, Character and block device drivers, General design of device drivers</p>	2	20 %
	<p><i>Text Editors:</i> Overview of Editing, User Interface, Editor Structure.</p>	2	
	<p><i>Debuggers :-</i> Debugging Functions and Capabilities, Relationship with other parts of the system, Debugging Methods- By Induction, Deduction and Backtracking.</p>	4	
END SEMESTER EXAM			

Question Paper Pattern

1. There will be *five* parts in the question paper – A, B, C, D, E
2. Part A
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules I and II; Allfour questions have to be answered.
3. Part B
 - a. Total marks : 18
 - b. Three questionseach having 9 marks, uniformly covering modules I and II; Two questions have to be answered. Each question can have a maximum of three subparts.
4. Part C
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules III and IV; Allfour questions have to be answered.
5. Part D
 - a. Total marks : 18

Course No.	Course Name	L-T-P -Credits	Year of Introduction
CS305	Microprocessors and Microcontrollers	2-1-0-3	2015
Pre-requisites			
<ol style="list-style-type: none"> 1. BE 101-05 Introduction to Computing and Problem Solving 2. CS203 Switching Theory and Logic Design 3. CS202 Computer Organization and Architecture 			
Course Objectives			
<ol style="list-style-type: none"> 1. <i>To impart basic understanding of the internal organisation of 8086 Microprocessor and 8051 microcontroller.</i> 2. <i>To introduce the concepts of interfacing microprocessors with external devices.</i> 3. <i>To develop Assembly language programming skills.</i> 			
Syllabus			
Introduction to 8086 Microprocessor; Architecture and signals, Instruction set of 8086, Timing Diagram, Assembly Language Programming, Memory and I/O interfacing, Interfacing with 8255, 8279, 8257, Interrupts and Interrupt handling, Microcontrollers - 8051 Architecture and its salient features, Instruction Set and Simple Programming Concepts.			
Expected Outcome			
Student is able to			
<ol style="list-style-type: none"> 1. <i>Describe different modes of operations of a typical microprocessor and microcontroller.</i> 2. <i>Design and develop 8086 assembly language programs using software interrupts and various assembler directives.</i> 3. <i>Interface microprocessors with various external devices.</i> 4. <i>Analyze and compare the features of microprocessors and microcontrollers.</i> 5. <i>Design and develop assembly language programs using 8051 microcontroller.</i> 			

Text Books

1. Bhurchandi and Ray, *Advanced Microprocessors and Peripherals*, Third Edition McGraw Hill.
2. Raj Kamal, *Microcontrollers: Architecture, Programming, Interfacing and System Design*, Pearson Education.
3. Douglas V. Hall, SSSP Rao, *Microprocessors and Interfacing*, Third Edition, McGrawHill Education.

References

1. Barry B. Brey, *The Intel Microprocessors - Architecture, Programming and Interfacing*, Eighth Edition, Pearson Education.
2. A. NagoorKani, *Microprocessors and Microcontrollers*, Second Edition, Tata McGraw Hill.

Course Plan

Module	Contents	Hours	Sem. Exam Marks %
I	Evolution of microprocessors, 8086 Microprocessor - Architecture and signals, Memory organisation, Minimum and maximum mode of operation, Minimum mode Timing Diagram. Comparison of 8086 and 8088.	07	15%
II	8086 Addressing Modes, 8086 Instruction set and Assembler Directives - Assembly Language Programming with Subroutines, Macros, Passing Parameters, Use of stack.	08	15%
FIRST INTERNAL EXAM			
III	Interrupts - Types of Interrupts and Interrupt Service Routine. Handling Interrupts in 8086, Interrupt programming. Basic Peripherals and their Interfacing with 8086 - Programmable Interrupt Controller - 8259 - Architecture.	07	15%

IV	Interfacing Memory, I/O, 8255 - Detailed study - Architecture, Control word format and modes of operation, Architecture and modes of operation of 8279 and 8257 (Just mention the control word, no need to memorize the control word format)	07	15%
SECOND INTERNAL EXAM			
V	Microcontrollers - Types of Microcontrollers - Criteria for selecting a microcontroller - Example Applications. Characteristics and Resources of a microcontroller. Organization and design of these resources in a typical microcontroller - 8051. 8051 Architecture, Register Organization, Memory and I/O addressing, Interrupts and Stack.	08	20%
VI	8051 Addressing Modes, Different types of instructions and Instruction Set, Simple programs. Peripheral Chips for timing control - 8254/8253.	08	20%

 - b. Three questions each having 9 marks, uniformly covering modules I and II; Two questions have to be answered. Each question can have a maximum of three subparts.
4. Part C
 - a. Total marks : 12

- b. Four questions each having 3 marks, uniformly covering modules III and IV; All four questions have to be answered.
5. Part D
 - a. Total marks : 18
 - b. Three questions each having 9 marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts
6. Part E
 - a. Total Marks: 40
 - b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
 - c. A question can have a maximum of three sub-parts.
7. There should be at least 60% analytical/numerical questions.

Course No.	Course Name	L-T-P-Credits	Year of Introduction
CS307	DATA COMMUNICATION	3-0-0-3	2015

Course Objectives

1. To introduce fundamental communication models.
2. To discuss various time domain and frequency domain concepts of data communication.
3. To introduce the concepts of encoding, multiplexing and spread spectrum.

Syllabus

Data Transmission, Transmission Impairments, Channel Capacity, Transmission media, Wireless propagation, Signal encoding Techniques, Multiplexing, Digital data transmission techniques, Sampling theorem, Error detection and correction, Spread spectrum, Basic principles of switching.

Expected Outcome

Student is able to

1. Identify and list the various issues present in the design of a data communication system.
2. Apply the time domain and frequency domain concepts of signals in data communication.
3. Compare and select transmission media based on transmission impairments and channel capacity.
4. Select and use appropriate signal encoding techniques and multiplexing techniques for a given scenario.
5. Design suitable error detection and error correction algorithms to achieve error free data communication and explain different switching techniques.

Text Books

2. Forouzan B. A., Data Communications and Networking, 5/e, Tata McGraw Hill, 2013. [Chapters:3,4, 5, 6,7,8]
3. Schiller J., Mobile Communications, 2/e, Pearson Education, 2009. [Chapters:2,3]
4. Curt M. White, Fundamentals of Networking and Communication 7/e, Cengage learning. [Chapter 3,4,9,10]

References

1. Forouzan B. A., Data Communications and Networking, 4/e, Tata McGraw Hill, 2007.
2. Tanenbaum A. S. and D. Wetherall, Computer Networks, Pearson Education, 2013.

COURSE PLAN

Module	Contents	Hours	Sem. Exam Marks %
I	Data Transmission: Communication model Simplex, half duplex and full duplex transmission - Periodic Analog signals: Sine wave, phase, wavelength, time and frequency domain, bandwidth - Digital Signals; Digital data Transmission:- Analog & Digital data, Analog & Digital signals, Analog & Digital transmission - Transmission Impairments: Attenuation, Delay distortion, Noise - Channel capacity: Nyquist Bandwidth, Shannon's Capacity formula.	08	15%
II	Transmission media - Guided Transmission Media: Twisted pair, Coaxial cable, optical fiber, Wireless Transmission, Terrestrial microwave, Satellite microwave. Wireless Propagation: Ground wave propagation, Sky Wave propagation, LoS Propagation.	07	15%
FIRST INTERNAL EXAM			

III	Signal Encoding techniques - Digital Data Digital Signals: NRZ, Multilevel binary, Biphase - Digital Data Analog Signals : ASK, FSK, PSK - Analog Data Digital Signals: Sampling theorem, PCM, Delta Modulation - Analog Data Analog Signals: AM, FM, PM.	07	15%
IV	Multiplexing- Space Division Multiplexing- Frequency Division Multiplexing: Wave length Division Multiplexing - Time Division multiplexing: Characteristics, Digital Carrier system, SONET/SDH-Statistical time division multiplexing: Cable Modem - Code Division Multiplexing. Multiple Access- CDMA.	07	15%
SECOND INTERNAL EXAM			
V	Digital Data Communication Techniques - Asynchronous transmission, Synchronous transmission-Detecting and Correcting Errors-Types of Errors-Error Detection: Parity check, Cyclic Redundancy Check (CRC) - Error Control Error Correction: Forward Error Correction and Hamming Distance.	06	20%
VI	Spread Spectrum Techniques-Direct Sequence Spread Spectrum (DSSS), Frequency Hopping Spread Spectrum (FHSS). Basic principles of switching - Circuit Switched Networks, Structure of Circuit Switch - Packet Switching: Datagram Networks, Virtual Circuit Networks, Structure of packet switches.	07	20%

Course No.	Course Name	L-T-P Credits	Year of Introduction
CS309	GRAPH THEORY AND COMBINATORICS	2-0-2-3	2015
Course Objectives			
<i>To introduce the fundamental concepts in graph theory, including properties and characterization of graphs/ trees and Graphs theoretic algorithms</i>			
Syllabus			
Introductory concepts of graphs, Euler and Hamiltonian graphs, Planar Graphs, Trees, Vertex connectivity and edge connectivity, Cut set and Cut vertices, Matrix representation of graphs, Graphs theoretic algorithms.			
Expected Outcome			
Student is able to			
<ol style="list-style-type: none"> <i>Demonstrate the knowledge of fundamental concepts in graph theory, including properties and characterization of graphs and trees.</i> <i>Use graphs for solving real life problems.</i> <i>Distinguish between planar and non-planar graphs and solve problems.</i> <i>Develop efficient algorithms for graph related problems in different domains of engineering and science.</i> 			
Text Books			
<ol style="list-style-type: none"> NarasimhaDeo, Graph theory, PHI. Douglas B. West, Introduction to Graph Theory, Prentice Hall India Ltd. Robin J. Wilson, Introduction to Graph Theory, Longman Group Ltd.

 - b. Three questions each having 9 marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts
6. Part E
 - a. Total Marks: 40

- b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
 - c. A question can have a maximum of three sub-parts.
7. There should be at least 60% analytical/numerical questions.

Course No.	Course Name	L-T-P-Credits	Year of Introduction
CS365	OPTIMIZATION TECHNIQUES	3-0-0-3	2015
Course Objectives <ol style="list-style-type: none"> To build an understanding on the basics of optimization techniques. To introduce basics of linear programming and meta- heuristic search techniques. 			
Syllabus Basics of Operations Research - Formulation of optimization problems - Linear Programming - Transportation Problem - Assignment Problem - Network flow Problem - Tabu Search - Genetic Algorithm - Simulated Annealing - Applications.			
Expected Outcome Student is able to <ol style="list-style-type: none"> Formulate mathematical models for optimization problems. Analyze the complexity of solutions to an optimization problem. Design programs using meta-heuristic search concepts to solve optimization problems. Develop hybrid models to solve an optimization problem. 			
Text Books <ol style="list-style-type: none"> Rao S.S., Optimization Theory and Applications, Wiley Eastern. Hamdy A. Taha, Operations Research – An introduction, Prentice – Hall India. G. Zapfel, R. Barune and M. Bogl, Meta heuristic search concepts: A tutorial with applications to production and logistics, Springer. 			
References <ol style="list-style-type: none"> Gass S. I., Introduction to Linear Programming, Tata McGraw Hill. Reeves C., Modern heuristic techniques for combinatorial problems, Orient Longman. Goldberg, Genetic algorithms in Search, optimization and Machine Learning, Addison Wesley. K. Deb, Optimization for engineering design – algorithms and examples, Prentice Hall of India. 			

COURSE PLAN			
Module	Contents	Hours	Sem. Exam Marks %
I	Decision-making procedure under certainty and under uncertainty - Operations Research-Probability and decision- making- Queuing or Waiting line theory-Simulation and Monte- Carlo Technique- Nature and organization of optimization problems- Scope and hierarchy of optimization- Typical applications of optimization.	08	15%
II	Essential features of optimization problems - Objective function- Continuous functions - Discrete functions - Unimodal functions - Convex and concave functions, Investment costs and operating costs in objective function - Optimizing profitably constraints-Internal and external constraints- Formulation of optimization problems. Continuous functions - Discrete functions - Unimodal functions - Convex and concave functions.	07	15%
FIRST INTERNAL EXAM			
III	Necessary and sufficient conditions for optimum of unconstrained functions-Numerical methods for unconstrained functions - One-dimensional search - Gradient-free search with fixed step size. Linear Programming - Basic concepts of linear programming - Graphical interpretation-Simplex method - Apparent difficulties in the Simplex method.	06	15%
IV	Transportation Problem, Loops in transportation table, Methods of finding initial basic feasible solution, Tests for optimality. Assignment Problem, Mathematical form of assignment problem, methods	06	15%

	of solution.		
SECOND INTERNAL EXAM			
V	Network analysis by linear programming and shortest route, maximal flow problem. Introduction to Non-traditional optimization, Computational Complexity - NP-Hard, NP-Complete. Tabu Search- Basic Tabu search, Neighborhood, Candidate list, Short term and Long term memory	07	20%
VI	Genetic Algorithms- Basic concepts, Encoding, Selection, Crossover, Mutation. Simulated Annealing - Acceptance probability, Cooling, Neighborhoods, Cost function. Application of GA and Simulated Annealing in solving sequencing and scheduling problems and Travelling salesman problem.	08	20%
END SEMESTER EXAM			

Question Paper Pattern

1. There will be *five* parts in the question paper - A, B, C, D, E
2. Part A
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules I and II; Allfour questions have to be answered.
3. Part B
 - a. Total marks : 18
 - b. Three questions each having 9 marks, uniformly covering modules I and II; Two questions have to be answered. Each question can have a maximum of three subparts.
4. Part C
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules III and IV; Allfour questions have to be answered.

5. Part D
 - a. Total marks : 18
 - b. Three questions each having 9 marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts
6. Part E
 - a. Total Marks: 40
 - b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
 - c. A question can have a maximum of three sub-parts.
7. There should be at least 60% analytical/numerical questions.

Course No.	Course Name	L-T-P -Credits	Year of Introduction
CS367	Logic for Computer Science	3-0-0-3	2015
Pre-requisites			
<ol style="list-style-type: none"> 1. BE101-05 Introduction to Computing and Problem Solving 2. CS205 Data Structures 			
Course Objectives			
<ol style="list-style-type: none"> 1. <i>To introduce the concepts of mathematical logic and its importance.</i> 2. <i>To discuss propositional, predicate, temporal and modal logic and their applications.</i> 			
Syllabus			
Propositional Logic, Resolution, binary decision diagrams, Predicate logic, resolution, temporal logic, deduction, program verification, modal logic.			
Expected Outcome			
Student is able to			
<ol style="list-style-type: none"> 1. <i>Explain the concept of logic and its importance.</i> 2. <i>Understand fundamental concepts in propositional logic and apply resolution techniques.</i> 3. <i>Understand fundamental concepts in predicate logic and apply resolution techniques.</i> 4. <i>Understand fundamental concepts in temporal logic and apply resolution techniques.</i> 5. <i>Understand the concept of program verification and apply it in real-world scenarios.</i> 6. <i>Understand fundamental concepts in modal logic.</i> 			
Text Books

Course Plan			
Module	Contents	Hours	Sem. Exam Marks %
I	<p>Introductory Concepts: Mathematical Logic, Propositional Logic, First Order Logic, Modal and Temporal logic, Program Verification.</p> <p>(Reading: Ben-Ari, Chapter 1)</p> <p>Propositional Logic: Formulae and interpretations, Equivalence, Satisfiability & Validity, Semantic Tableaux, Soundness and Completeness.</p> <p>(Reading: Ben-Ari, Chapter 2 except 2.4, Additional Reading : Singh, Chapter 1)</p>	06	15%
II	<p>The Hilbert Deductive System, Derived Rules, Theorems and operators, Soundness and Completeness, Consistency.</p> <p>(Reading: Ben-Ari, Chapter 3 except 3.7 and 3.8, Additional Reading : Singh, Chapter 1)</p> <p>Resolution in Propositional Logic: Conjunctive Normal form, Clausal form, resolution rule.</p> <p>(Reading: Ben-Ari, Chapter 4.1, 4.2, 4.3, Additional Reading : Singh, Chapter 1)</p>	06	15%
FIRST INTERNAL EXAM			
III	<p>Binary Decision Diagrams: Definition, Reduced and ordered BDD, Operators.</p> <p>(Reading: Ben-Ari, Chapter 5.1 - 5.5)</p> <p>Predicate Logic: Relations, predicates, formulae and interpretation, logical equivalence, semantic tableaux, soundness.</p> <p>Reading: Ben-Ari, Chapter 7.1-7.6, Additional Reading : Singh, Chapter 2)</p>	07	15%
IV	<p>The Hilbert deduction system for predicate logic. Functions, PCNF and clausal form, Herbrand</p>	08	15%

	model. Resolution in predicate logic: ground resolution, substitution, unification, general resolution. Reading: Ben-Ari, Chapter 8.1-8.4, 9.1, 9.3, 10.1-10.4, Additional Reading : Singh, Chapter 2, Chapter 3)		
SECOND INTERNAL EXAM			
V	Temporal logic: Syntax and semantics, models of time, linear time temporal logic, semantic tableaux. Deduction system of temporal logic. (Reading: Ben-Ari, Chapter 13.1-13.5, 14.1-14.2)	07	20%
VI	Program Verification: Need for verification, Framework for verification, Verification of sequential programs, deductive system, verification, synthesis. (Reading: Ben-Ari, Chapter 15.1-15.4, Additional Reading : Singh, Chapter 5) Modal Logic: Need for modal logic, Case Study: Syntax and Semantics of K, Axiomatic System KC, (Reading: Singh, Chapter 6.1-6.3)	08	20%
END SEMESTER EXAM			

Assignments

Some of the assignments can be given on an interactive theorem prover like Isabelle or Coq.

Question Paper Pattern

1. There will be *five* parts in the question paper - A, B, C, D, E
2. Part A
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules I and II; Allfour questions have to be answered.
3. Part B
 - a. Total marks : 18

- b. Three questions each having 9 marks, uniformly covering modules I and II; Two questions have to be answered. Each question can have a maximum of three subparts.
4. Part C
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules III and IV; Allfour questions have to be answered.
5. Part D
 - a. Total marks : 18
 - b. Three questionseach having 9 marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts
6. Part E
 - a. Total Marks: 40
 - b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
 - c. A question can have a maximum of three sub-parts.
7. There should be at least 60% analytical/numerical questions.

CS369	Digital System Testing & Testable Design	3-0-0-3	2015
Pre-requisites			
<ol style="list-style-type: none"> 1. CS203 Switching Theory and Logic Design 2. CS234 Digital Systems Lab 			
Course Objectives			
<ol style="list-style-type: none"> 1. To expose the students to the basics of digital testing techniques applied to VLSI circuits. 2. To introduce the concepts of algorithm development for automatic test pattern generation for digital circuits. 3. To discuss fundamentals of design for testability. 			
Syllabus			
Basic terminology used in testing - functional and structural models of digital systems -logic simulation for design verification and testing-fault modeling - fault simulation - testing for faults - design for testability.			
Expected Outcome			
Student is able to			
<ol style="list-style-type: none"> 1. Appreciate the basics of VLSI testing and functions modeling of circuits. 2. Apply fault modeling using single stuck & multiple stuck modeling for combinational circuits. 3. Evaluate different methods for logic and fault simulations. 4. Generate test patterns using automatic test pattern generation methods like D, PODEM & FAN algorithms for combinational circuits. 5. Explain automatic test pattern generation using time frame expansion and simulation based method for sequential circuits. 6. Design digital circuits using scan path and self tests.

 - b. Three questionseach having 9 marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts
6. Part E
 - a. Total Marks: 40
 - b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
 - c. A question can have a maximum of three sub-parts.
7. There should be at least 60% analytical/numerical/design questions.

S5 - LABORATORY COURSES

Course No.	Course Name	L-T-P Credits	Year of Introduction
CS331	SYSTEM SOFTWARE LAB	0-0-3-1	2015
Course Objectives			
<i>To build an understanding on design and implementation of different types of system software.</i>			
List of Exercises/Experiments: (Exercises/experiments marked with * are mandatory from each part. Total 12 Exercises/experiments are mandatory)			
<u>Part A</u>			
1. Simulate the following non-preemptive CPU scheduling algorithms to find turnaround time and waiting time.			
a) FCFS b) SJF c) Round Robin (pre-emptive) d) Priority			
2. Simulate the following file allocation strategies.			
a) Sequential b) Indexed c) Linked			
3. Implement the different paging techniques of memory management.			
4. Simulate the following file organization techniques *			
a) Single level directory b) Two level directory c) Hierarchical			
5. Implement the banker's algorithm for deadlock avoidance.*			
6. Simulate the following disk scheduling algorithms. *			
a) FCFS b)SCAN c) C-SCAN			
7. Simulate the following page replacement algorithms			
a) FIFO b)LRU c) LFU			
8. Implement the producer-consumer problem using semaphores. *			
9. Write a program to simulate the working of the dining philosopher's problem.*			

Part B

10. Implement the symbol table functions: create, insert, modify, search, and display.
11. Implement pass one of a two pass assembler. *
12. Implement pass two of a two pass assembler. *
13. Implement a single pass assembler. *
14. Implement a two pass macro processor *
15. Implement a single pass macro processor.
16. Implement an absolute loader.
17. Implement a relocating loader.
18. Implement pass one of a direct-linking loader.
19. Implement pass two of a direct-linking loader.
20. Implement a simple text editor with features like insertion / deletion of a character, word, and sentence.
21. Implement a symbol table with suitable hashing.*

Expected Outcome

Student is able to

1. *Compare and analyze CPU Scheduling Algorithms like FCFS, Round Robin, SJF, and Priority.*
2. *Implement basic memory management schemes like paging.*
3. *Implement synchronization techniques using semaphores etc.*
4. *Implement banker's algorithm for deadlock avoidance.*
5. *Implement memory management schemes and page replacement schemes and file allocation and organization techniques.*
6. *Implement system software such as loaders, assemblers and macro processor.*

Course No.	Course Name	L-T-P - Credits	Year of Introduction
CS333	APPLICATION SOFTWARE DEVELOPMENT LAB	0-0-3-1	2015
Pre-requisite			
1. CS208 Principles of Database Design			
Course Objectives			
1. To introduce basic commands and operations on database.			
2. To introduce stored programming concepts (PL-SQL) using Cursors and Triggers .			
3. To familiarize front end tools of database.			
List of Exercises/Experiments: (Exercises/experiments marked with * are mandatory from each part. Total 12 Exercises/experiments are mandatory)			
1. Creation of a database using DDL commands and writes DQL queries to retrieve information from the database.			
2. Performing DML commands like Insertion, Deletion, Modifying, Altering, and Updating records based on conditions.			
3. Creating relationship between the databases. *			
4. Creating a database to set various constraints. *			
5. Practice of SQL TCL commands like Rollback, Commit, Savepoint.			
6. Practice of SQL DCL commands for granting and revoking user privileges.			
7. Creation of Views and Assertions *			
8. Implementation of Build in functions in RDBMS *			
9. Implementation of various aggregate functions in SQL *			
10. Implementation of Order By, Group By & Having clause. *			
11. Implementation of set operators, nested queries and Join queries *			
12. Implementation of various control structures using PL/SQL *			
13. Creation of Procedures and Functions *			
14. Creation of Packages *			
15. Creation of database Triggers and Cursors *			
16. Practice various front-end tools and report generation.			
17. Creating Forms and Menus			
18. Mini project (Application Development using Oracle/ MySQL using Database connectivity)*			

- a. Inventory Control System.
- b. Material Requirement Processing.
- c. Hospital Management System.
- d. Railway Reservation System.
- e. Personal Information System.
- f. Web Based User Identification System.
- g. Timetable Management System.
- h. Hotel Management System.

Expected Outcome

Student is able to

1. *Design and implement a database for a given problem using database design principles.*
2. *Apply stored programming concepts (PL-SQL) using Cursors and Triggers.*
3. *Use graphical user interface, Event Handling and Database connectivity to develop and deploy applications and applets.*
4. *Develop medium-sized project in a team.*

B-Tech Computer Science & Engineering

Sixth Semester

Course Syllabus & Course Plan

S6 - CORE COURSES

Course No.	Course Name	L-T-P -Credits	Year of Introduction
CS302	Design and Analysis of Algorithms	3-1-0-4	2015
<p>Course Objectives</p> <ol style="list-style-type: none"> 1. To introduce the concepts of Algorithm Analysis, Time Complexity, Space Complexity. 2. To discuss various Algorithm Design Strategies with proper illustrative examples. 3. To introduce Complexity Theory. 			
<p>Syllabus</p> <p>Introduction to Algorithm Analysis, Notions of Time and Space Complexity, Asymptotic Notations, Recurrence Equations and their solutions, Master's Theorem, Divide and Conquer and illustrative examples, AVL trees, Red-Black Trees, Union-find algorithms, Graph algorithms, Divide and Conquer, Dynamic Programming, Greedy Strategy, Back Tracking and Branch and Bound, Complexity classes</p>			
<p>Expected outcome</p> <p>Student is able to</p> <ol style="list-style-type: none"> 1. Analyze a given algorithm and express its time and space complexities in asymptotic notations. 2. Solve recurrence equations using Iteration Method, Recurrence Tree Method and Master's Theorem. 3. Design algorithms using Divide and Conquer Strategy. 4. Compare Dynamic Programming and Divide and Conquer Strategies. 5. Solve Optimization problems using Greedy strategy. 6. Design efficient algorithms using Back Tracking and Branch Bound Techniques for solving problems. 7. Classify computational problems into P, NP, NP-Hard and NP-Complete. 			
<p>Text Books</p> <ol style="list-style-type: none"> 1. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, Introduction to Algorithms, MIT Press [Modules 1,2,6] 2. Ellis Horowitz, SartajSahni, SanguthevarRajasekaran, Computer Algorithms, Universities Press, 2007 [Modules 3,4,5]

Ullman, The Design and Analysis of Computer Algorithms, Pearson Education, 1999. 4. Gilles Brassard, Paul Bratley, Fundamentals of Algorithmics, Pearson Education.			
Course Plan			
Module	Contents	Hours	Sem. Exam Marks %
I	<i>Introduction to Algorithm Analysis</i> Time and Space Complexity- Elementary operations and Computation of Time Complexity- Best, worst and Average Case Complexities- Complexity Calculation of simple algorithms	04	15 %
	<i>Recurrence Equations</i> :Solution of Recurrence Equations - Iteration Method and Recursion Tree Methods,	04	
II	<i>Master's Theorem</i> (Proof not required) - examples, Asymptotic Notations and their properties- Application of Asymptotic Notations in Algorithm Analysis- Common Complexity Functions	04	15%
	<i>AVL Trees</i> - rotations, Red-Black Trees insertion and deletion (Techniques only; algorithms not expected). B-Trees - insertion and deletion operations. Sets- Union and find operations on disjoint sets.	05	
FIRST INTERNAL EXAM			
III	<i>Graphs</i> - DFS and BFS traversals, complexity, Spanning trees - Minimum Cost Spanning Trees, single source shortest path algorithms, Topological sorting, strongly connected components.	07	15%

IV	<i>Divide and Conquer</i> :The Control Abstraction, 2 way Merge sort, Strassen's Matrix Multiplication, Analysis	04	15%
	<i>Dynamic Programming</i> : The control Abstraction- The Optimality Principle- Optimal matrix multiplication, Bellman-Ford Algorithm	04	
SECOND INTERNAL EXAM			
V	Analysis, Comparison of Divide and Conquer and Dynamic Programming strategies	02	20%
	<i>Greedy Strategy</i> : - The Control Abstraction- the Fractional Knapsack Problem,	04	
	Minimal Cost Spanning Tree Computation- Prim's Algorithm – Kruskal's Algorithm.	03	
VI	<i>Back Tracking</i> : -The Control Abstraction – The N Queen's Problem, 0/1 Knapsack Problem	03	20%
	<i>Branch and Bound</i> :Travelling Salesman Problem.	03	
	<i>Introduction to Complexity Theory</i> :-Tractable and Intractable Problems- The P and NP Classes- Polynomial Time Reductions - The NP- Hard and NP- Complete Classes	03	
END SEMESTER EXAM			

Question Paper Pattern

1. There will be *five* parts in the question paper – A, B, C, D, E
2. Part A
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules I and II; Allfour questions have to be answered.
3. Part B
 - a. Total marks : 18

- b. Three questions each having 9 marks, uniformly covering modules I and II; Two questions have to be answered. Each question can have a maximum of three subparts.
4. Part C
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules III and IV; Allfour questions have to be answered.
5. Part D
 - a. Total marks : 18
 - b. Three questions each having 9 marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts
6. Part E
 - a. Total Marks: 40
 - b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
 - c. A question can have a maximum of three sub-parts.
7. There should be at least 60% analytical/numerical questions.

Course No.	Course Name	L-T-P Credits	Year of Introduction
CS304	COMPILER DESIGN	3-0-0-3	2015
Course Objectives <i>To provide a thorough understanding of the internals of Compiler Design.</i>			
Syllabus Phases of compilation, Lexical analysis, Token Recognition, Syntax analysis, Bottom Up and Top Down Parsers, Syntax directed translation schemes, Intermediate Code Generation, Triples and Quadruples, Code Optimization, Code Generation.			
Expected Outcome Student is able to <ol style="list-style-type: none"> 1. Explain the concepts and different phases of compilation with compile time error handling. 2. Represent language tokens using regular expressions, context free grammar and finite automata and design lexical analyzer for a language. 3. Compare top down with bottom up parsers, and develop appropriate parser to produce parse tree representation of the input. 4. Generate intermediate code for statements in high level language. 5. Design syntax directed translation schemes for a given context free grammar. 6. Apply optimization techniques to intermediate code and generate machine code for high level language program. 			
Text Books <ol style="list-style-type: none"> 1. Aho A. Ravi Sethi and D Ullman. Compilers - Principles Techniques and Tools, Addison Wesley. 2. D. M.Dhamdhare, System Programming and Operating Systems, Tata McGraw Hill & Company. 			
References <ol style="list-style-type: none"> 1. Kenneth C. Loudon, Compiler Construction - Principles and Practice, Cengage Learning Indian Edition. 2. Tremblay and Sorenson, The Theory and Practice of Compiler Writing, Tata McGraw Hill & Company. 			

Course Plan			
Module	Contents	Hours	Sem. Exam Marks %
I	Introduction to compilers - Analysis of the source program, Phases of a compiler, Grouping of phases, compiler writing tools - bootstrapping Lexical Analysis: The role of Lexical Analyzer, Input Buffering, Specification of Tokens using Regular Expressions, Review of Finite Automata, Recognition of Tokens.	07	15%
II	Syntax Analysis: Review of Context-Free Grammars - Derivation trees and Parse Trees, Ambiguity. Top-Down Parsing: Recursive Descent parsing, Predictive parsing, LL(1) Grammars.	06	15%
FIRST INTERNAL EXAM			
III	Bottom-Up Parsing: Shift Reduce parsing - Operator precedence parsing (Concepts only) LR parsing - Constructing SLR parsing tables, Constructing, Canonical LR parsing tables and Constructing LALR parsing tables.	07	15%
IV	Syntax directed translation: Syntax directed definitions, Bottom- up evaluation of S-attributed definitions, L- attributed definitions, Top-down translation, Bottom-up evaluation of inherited attributes. Type Checking : Type systems, Specification of a simple type checker.	08	15%
SECOND INTERNAL EXAM			
V	Run-Time Environments: Source Language issues, Storage organization, Storage-		

	allocation strategies. Intermediate Code Generation (ICG): Intermediate languages - Graphical representations, Three-Address code, Quadruples, Triples. Assignment statements, Boolean expressions.	07	20%
VI	Code Optimization: Principal sources of optimization, Optimization of Basic blocks Code generation: Issues in the design of a code generator. The target machine, A simple code generator.	07	20%
END SEMESTER EXAM			

Question Paper Pattern

Course Plan			
Module	Contents	Hours	Sem. Exam Marks
I	Introduction - Uses - Network Hardware - LAN -MAN - WAN, Internetworks - Network Software - Protocol hierarchies - Design issues for the layers - Interface & Service - Service Primitives. Reference models - OSI - TCP/IP.	07	15%
II	Data Link layer Design Issues - Flow Control and ARQ techniques. Data link Protocols - HDLC. DLL in Internet. MAC Sub layer - IEEE 802 FOR LANs & MANs, IEEE 802.3, 802.4, 802.5. Bridges - Switches - High Speed LANs - Gigabit Ethernet. Wireless LANs - 802.11 a/b/g/n, 802.15.PPP	08	15%
FIRST INTERNAL EXAMINATION			
III	Network layer - Routing - Shortest path routing, Flooding, Distance Vector Routing, Link State Routing, RIP, OSPF, Routing for mobile hosts.	07	15%
IV	Congestion control algorithms - QoS. Internetworking - Network layer in internet. IPv4 - IP Addressing - Classless and Classfull Addressing. Sub-netting.	07	15%
SECOND INTERNAL EXAMINATION			
V	Internet Control Protocols - ICMP, ARP, RARP, BOOTP. Internet Multicasting - IGMP, Exterior Routing Protocols - BGP. IPv6 - Addressing - Issues, ICMPv6.	07	20%
VI	Transport Layer - TCP & UDP. Application layer -FTP, DNS, Electronic mail, MIME, SNMP. Introduction to World Wide Web.	07	20%
END SEMESTER EXAM			

Question Paper Pattern

1. There will be *five* parts in the question paper - A, B, C, D, E

2. Part A
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules I and II; All four questions have to be answered.
3. Part B
 - a. Total marks : 18
 - b. Three questions each having 9 marks, uniformly covering modules I and II; Two questions have to be answered. Each question can have a maximum of three subparts.
4. Part C
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules III and IV; All four questions have to be answered.
5. Part D
 - a. Total marks : 18
 - b. Three questions each having 9 marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts
6. Part E
 - a. Total Marks: 40
 - b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
 - c. A question can have a maximum of three sub-parts.
7. There should be at least 60% analytical/numerical questions.

Course No.	Course Name	L-T-P-Credits	Year of Introduction
CS308	Software Engineering and Project Management	3-0-0-3	2015
Pre-requisite:			
Course Objectives			
<ol style="list-style-type: none"> 1. To introduce the fundamental concepts of software engineering. 2. To build an understanding on various phases of software development. 3. To introduce various software process models. 			
Syllabus			
Introduction to software engineering, Software process models, Software development phases, Requirement analysis, Planning, Design, Coding, Testing, Maintenance.			
Expected Outcome			
Student is able to			
<ol style="list-style-type: none"> 1. Identify suitable life cycle models to be used. 2. Analyze a problem and identify and define the computing requirements to the problem. 3. Translate a requirement specification to a design using an appropriate software engineering methodology. 4. Formulate appropriate testing strategy for the given software system. 5. Develop software projects based on current technology, by managing resources economically and keeping ethical values.

COURSE PLAN

Module	Contents	Hours	Sem. Exam Marks%
I	Introduction to software engineering- scope of software engineering - historical aspects, economic aspects, maintenance aspects, specification and design aspects, team programming aspects. Software engineering a layered technology - processes, methods and tools. Software process models - prototyping models, incremental models, spiral model, waterfall model.	07	15%
II	Process Framework Models: Capability maturity model (CMM), ISO 9000. Phases in Software development - requirement analysis- requirements elicitation for software, analysis principles, software prototyping, specification.	06	15%
FIRST INTERNAL EXAM			
III	Planning phase - project planning objective, software scope, empirical estimation models- COCOMO, single variable model, staffing and personal planning. Design phase - design process, principles, concepts, effective modular design, top down, bottom up strategies, stepwise	07	15%

	refinement.		
IV	Coding - programming practice, verification, size measures, complexity analysis, coding standards. Testing - fundamentals, white box testing, control structure testing, black box testing, basis path testing, code walk-throughs and inspection, testing strategies-Issues, Unit testing, integration testing, Validation testing, System testing.	07	15%
SECOND INTERNAL EXAM			
V	Maintenance-Overview of maintenance process, types of maintenance. Risk management: software risks - risk identification-risk monitoring and management. Project Management concept: People - Product-Process-Project.	07	20%
VI	Project scheduling and tracking: Basic concepts-relation between people and effort-defining task set for the software project-selecting software engineering task Software configuration management: Basics and standards User interface design - rules. Computer aided software engineering tools - CASE building blocks, taxonomy of CASE tools, integrated CASE environment.	08	20%
END SEMESTER EXAM			

Question Paper Pattern

Module	Contents	Hours	Sem. Exam Marks %
I	<p>Introduction to the Internet: The World Wide Web, Web Browsers, Web Servers, Uniform Resource Locators, Multipurpose Internet Mail Extensions, The Hypertext Transfer Protocol. Common Gateway Interface(CGI), Content Management System – Basics</p> <p><i>Case Study:</i> Apache Server, WordPress.</p>	06	15%
II	<p>Introduction to HTML/XHTML : Origins and Evolution of HTML and XHTML, Basic Syntax of HTML, Standard HTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, HTML5, Syntactic Differences between HTML and XHTML.</p>	07	15%
FIRST INTERNAL EXAM			
III	<p>Introduction to Styles sheets and Frameworks</p> <p>Cascading Style Sheets: Levels of Style Sheets - Style Specification Formats, Selector Forms, Property-Value Forms, Font Properties, List Properties, Alignment of Text, Color, The Box Model, Background</p>	06	15%

	Images, The span and div Tags. Frameworks: Overview and Basics of Responsive CSS Frameworks - Bootstrap.		
IV	Introduction to JavaScript and jQuery The Basics of JavaScript: Overview of JavaScript, Object Orientation and JavaScript, General Syntactic Characteristics- Primitives, Operations, and Expressions, Screen Output and Keyboard Input, Control Statements, Object Creation and Modification, Arrays, Functions. Callback Functions, Java Script HTML DOM. Introduction to jQuery: Overview and Basics.	07	15%
SECOND INTERNAL EXAMINATION			
V	Introduction to Data Interchange Formats XML: The Syntax of XML, XML Document Structure, Namespaces, XML Schemas, Displaying Raw XML Documents, Displaying XML Documents with CSS, XSLT Style Sheets, XML Applications. JSON(Basics Only): Overview, Syntax, Datatypes, Objects, Schema, Comparison with XML.	08	20%
VI	Introduction to PHP: Origins and Uses of PHP, Overview of PHP - General Syntactic Characteristics - Primitives, Operations, and Expressions - Control Statements, Arrays, Functions, Pattern Matching, Form Handling, Cookies, Session Tracking.	08	20%
END SEMESTER EXAM			

Assignment:

It is highly recommended to give assignment based on:

1. JavaScript Frameworks (like AngularJS or/and NodeJS)
2. Any PHP web app based on frameworks(like Laravel, CodeIgniter, CakePHP, Zend etc.)

Question Paper Pattern

1. There will be *five* parts in the question paper - A, B, C, D, E
2. Part A
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules I and II; Allfour questions have to be answered.
3. Part B
 - a. Total marks : 18
 - b. Three questions each having 9 marks, uniformly covering modules I and II; Two questions have to be answered. Each question can have a maximum of three subparts.
4. Part C
 - a. Total marks : 12
 - b. Four questions each having 3 marks, uniformly covering modules III and IV; Allfour questions have to be answered.
5. Part D
 - a. Total marks : 18
 - b. Three questions each having 9 marks, uniformly covering modules III and IV; Two questions have to be answered. Each question can have a maximum of three subparts
6. Part E
 - a. Total Marks: 40
 - b. Six questions each carrying 10 marks, uniformly covering modules V and VI; four questions have to be answered.
 - c. A question can have a maximum of three sub-parts.

Pre-requisite			
1. CS305 Microprocessors and Microcontrollers			
Course Objectives			
<ol style="list-style-type: none"> 1. To practice assembly language programming on 8086. 2. To practice fundamentals of interfacing/programming various peripheral devices with microprocessor/microcontroller. 			
List of Exercises/ Experiments: (Minimum 12 Exercises/ Experiments are mandatory. Exercises/ Experiments marked with * are mandatory)			
I. Assembly Language Programming Exercises/Experiments using 8086 Trainer kit			
<ol style="list-style-type: none"> 1. Implementation of simple decimal arithmetic and bit manipulation operations.* 2. Implementation of code conversion between BCD, Binary, Hexadecimal and ASCII. 3. Implementation of searching and sorting of 16-bit numbers. 4. Programming exercises using stack and subroutines.* 			
II. Exercises/Experiments using MASM (PC Required)			
<ol style="list-style-type: none"> 5. Study of Assembler and Debugging commands. 6. Implementation of decimal arithmetic(16 and 32 bit) operations.* 7. Implementation of String manipulations.* 8. Implementation of searching and sorting of 16-bit numbers. 9. Implementation of Matrix operations like addition, transpose, multiplication etc. 			
III. Interfacing Exercises/Experiments with 8086 trainer kit through Assembly Language Programming			
<ol style="list-style-type: none"> 10. Interfacing with stepper motor - Rotate through any given sequence.* 11. Interfacing with 8255 (mode0 and mode1 only).* 12. Interfacing with 8279 (Rolling message, 2 key lock out and N-key roll over implementation).* 13. Interfacing with 8253/54 Timer/Counter. 			

14. Interfacing with Digital-to-Analog Converter.*
15. Interfacing with Analog-to-Digital Converter.
16. Interfacing with 8259 Interrupt Controller.

IV. Exercises/Experiments using 8051 trainer kit

17. Familiarization of 8051 trainer kit by executing simple Assembly Language programs such as decimal arithmetic and bit manipulation.*
18. Implementation of Timer programming (in mode1).
19. Implementation of stepper motor interfacing, ADC/DAC interfacing and sensor interfacing with 8251 through Assembly Language programming.

Expected Outcome

Student is able to

1. *Develop assembly language programs for problem solving using software interrupts and various assembler directives.*
2. *Implement interfacing of various I/O devices to the microprocessor/microcontroller through assembly language programming.*

Course No.	Course Name	L-T-P-Credits	Year of Introduction
CS334	Network Programming Lab	0-0-3-1	2015
Pre-requisite			
<ol style="list-style-type: none"> 1. CS307 Data Communication 2. CS306 Computer Networks 			
Course Objectives			
<ol style="list-style-type: none"> 1. To introduce Network related commands and configuration files in Linux Operating System. 2. To introduce tools for Network Traffic Analysis and Network Monitoring. 3. To practice Network Programming using Linux System Calls. 4. To design and deploy Computer Networks. 			
List of Exercises/ Experiments (12 Exercises/ Experiments are to be completed . Exercises/ Experiments marked with * are mandatory)			
<ol style="list-style-type: none"> 1. Getting started with Basics of Network configurations files and Networking Commands in Linux. 2. To familiarize and understand the use and functioning of System Calls used for Operating system and network programming in Linux. 3. <u>Familiarization and implementation of programs related to Process and thread.</u> 4. <u>Implement the First Readers-Writers Problem.</u> 5. <u>Implement the Second Readers-Writers problem.</u> 6. <u>Implement programs for Inter Process Communication using PIPE, Message Queue and Shared Memory.</u> 7. Implement Client-Server communication using Socket Programming and TCP as transport layer protocol.* 8. Implement Client-Server communication using Socket Programming and UDP as transport layer protocol.* 9. Implement a multi user chat server using TCP as transport layer protocol.* 10. Implement Concurrent Time Server application using UDP to execute the program at remoteserver. Client sends a time request to the server, server sends its system time back to the client. Client displays the result.* 11. Implement and simulate algorithm for Distance vector routing protocol. 12. Implement and simulate algorithm for Link state routing protocol. 			

13. Implement Simple Mail Transfer Protocol.*
14. Develop concurrent file server which will provide the file requested by client if it exists. If not server sends appropriate message to the client. Server should also send its process ID (PID) to clients for display along with file or the message.*
15. Using Wireshark observe data transferred in client server communication using UDP and identify the UDP datagram.
16. Using Wireshark observe Three Way Handshaking Connection Establishment, Data Transfer and Three Way Handshaking Connection Termination in client server communication using TCP.
17. Develop a packet capturing and filtering application using raw sockets.
18. Design and configure a network with multiple subnets with wired and wireless LANs using required network devices. Configure the following services in the network- TELNET, SSH, FTP server, Web server, File server, DHCP server and DNS server.*
19. Install network simulator NS-2 in any of the Linux operating system and simulate wired and wireless scenarios.

Expected Outcome

Student is able to

1. *Use network related commands and configuration files in Linux Operating System.*
2. *Develop operating system and network application programs.*
3. *Analyze network traffic using network monitoring tools.*
